10th ANNIVERSARY

Just over a decade has passed since former Motocross racer and MX World Championship team owner/manager Tony Amoriello had a vision for a unique helmet that could address inadequacies that he believed were still, after decades of technological advancements, going unmet in the motorcycle helmet industry.

He sets out with the not-so-modest goal of creating the best helmet in the world, and, in 2011, JUST1 Helmets was created.

In 2012, JUST1 made its debut into the off-road world with the revolutionary J12 helmet which immediately redefined trends in terms of protection, design and styling.

The experience and success achieved over the last 10 years has been an essential factor in expanding the company's product line beyond only helmets and into the go to brand for complete head to toe protection.

After a decade of global racing achievement, JUST1 have created the successor of the revolutionary J12, the brand's new top-of-the-line helmet, the J22.

J22 is the result of years of continuous research and development, its patented and exclusive new technical features help ensure even higher levels of safety and comfort and it looks great as well, merging American and European overtones into something stylish and new. Along with JUST1 apparel and JUST1 optics division introducing the cutting-edge NERVE Goggle, alongside the ever-popular IRIS and VITRO goggles, JUST1 is launching the new and innovative MX Boots J-BX R.

To celebrate JUST1's 10 years of innovation, we have created a dedicated, comprehensive full race kit design finished in full black with bronze accents. The design is both sleek and bold in style and appearance and once coupled with the complimentary colourway J12 and J22 helmet and NERVE goggle ...the revolution continues.

J22

NEW OFF ROAD HELMET

In 2012, JUST1 made its debut in the off-road world with the revolutionary J12 helmet which immediately redefined trends in terms of protection and design. The experience and successes achieved over the last 10 years have been an essential factor in discovering new technical and stylistic frontiers in helmet design. The J22 helmet is the result of this important research, a study aimed at improving technical features to help ensure the safety and comfort of the rider during competition. While at the same time considering important stylistic research aimed at bringing the aesthetic characteristics of the American and European off-road sector closer together.

Nel 2012 JUST1 fa il suo debutto nel mondo off-road con il rivoluzionario casco J12 che, fin da subito, ha ridefinito i trend in fatto di protezione e design. le esperienze e i successi maturati in questi 10 anni sono stati un fattore essenziale per scoprire nuove frontiere tecniche e stilistiche nel settore caschi. Il casco J22 è il risultato di questa importante ricerca, uno studio mirato a prefezionare le caratteristiche tecniche relative a comfort e sicurezza del pilota in azione. Allo stesso tempo è stata effettuata un'importante ricerca stilistica volta a fondere insieme le caratteristiche estetiche del settore off-road Americano ed Europeo.

SEQUENTIAL DENSITY CONSTRUCTION

The J-22 is the most advanced helmet we've ever made. The J-22 is designed to manage linear and rotational energy to the head during impacts through its S.D.C. system. The J-22 is quickly setting a new level for rider protection off-road and within off road racing. Riders today need a helmet that provides pro level protection, the sequential density construction of this helmet uses specific materials of differing density to manage the force of impacts.. The two layers each have their own function, the EPP(red) and EPS(grey) shells work together in harmony to manage energy from different intensity impacts.

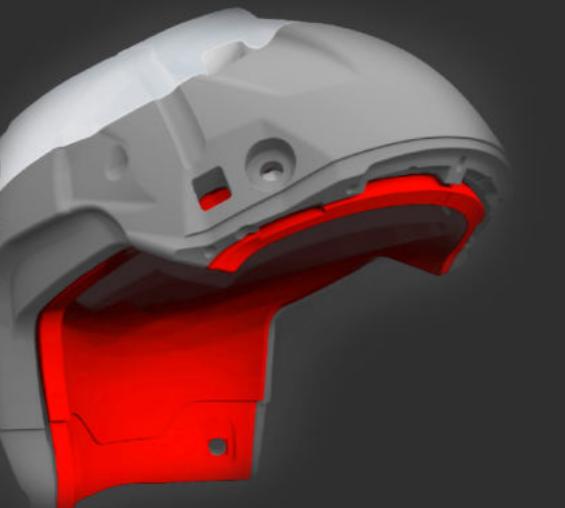

J-22 è il casco più innovativo mai realizzato da JUST1, è stato progettato per gestire l'energia lineare e rotazionale durante l'impatto alla testa. Il J-22 sta rapidamente stabilendo un nuovo livello di protezione nelle competizioni off-road. I motociclisti oggi hanno bisogno di un casco che fornisca una protezione di livello professionale, infatti grazie alla costruzione a densità sequenziale di questo casco siamo in grado di gestire la forza d'impatto. Ognuna delle due calotte ha una funzione specifica, l'EPP (in rosso) e l'EPS (in grigio) lavorano insieme per gestire e dissipare l'energia creata dopo impatti di diversa entità.

INNER SHELL : EPP

OUTER RING : HIGH DENSITY EPS

TOP : LOW DENSITY EPS

ROTATIONAL ENERGY MANAGEMENT

MOBILE SPACER : ALLOWS RELATIVE MOVEMENTS OF THE ELEMENTS OF THE INNER SHELL AND REDUCE ROTATIONAL ENERGY TRANSFER FROM ANGULAR IMPACTS.

MOBILE SPACER

HELMET AERODYNAMICS & VENTILATION SYSTEM

Ventilation is essential. With mouth and eyebrow massive and multiple air vents system, JUST1J22 is designed to maximize airflow to your head. Tried and tested ventilation that allows for proper extraction of heat from the helmet, allowing for a cooler ride in even warm weather conditions. Attention was also paid to the metal membrane integrated on the chin air vent, which makes it less likely that rubble and flying debris could penetrate those areas.

La ventilazione è essenziale. Con multiple e importanti prese d'aria sulla mentoniera e sulla fronte del casco, JUST1J22 è stato ideato per massimizzare il circolo d'aria intorno alla testa del pilota.

Sistema collaudato di ventilazione integrale che consente una corretta estrazione del calore dall'interno del casco, per una guida sempre fresca anche in condizioni climatiche calde. Tutte le prese d'aria sono realizzate con una opportuna rete metallica anti-intrusione e risultano di facile pulizia.

SAFETY TECHNOLOGY EMERGENCY REMOVABLE CHINBAR SYSTEM

Rapid response ,in case of accident, is an essential factor in minimizing damage to an injured rider. JUST1 has analysed main features of helmets in order to optimize this important element.

E.R.C. System is a technical feature designed to speed up and make the removal of a helmet from the rider's head simpler and safer.

Pulling a single button, located in the central/front part of the chin guard, it is possible remove the entire inner lower part, consisting in 2 cheek pads and the front EPP of the chin guard.

Once removed, with a single movement, it becomes possible to give more space and access to the head of the injured rider.

This is a revolutionary system in the motorcycle area, we are proud to introduce an important progress in this sector.

Un intervento rapido, in caso di incidente, è un fattore essenziale per ridurre al minimo i danni a un pilota ferito.

JUST1 ha analizzato le caratteristiche principali dei caschi al fine di ottimizzare questo importante elemento.

E.R.C. System è un accorgimento tecnico studiato per velocizzare e rendere più semplice e sicura la rimozione del casco dalla testa del pilota in caso di incidente.

Tirando un unico pulsante, posto nella parte centrale/anteriore della mentoniera, è possibile rimuovere l'intera parte inferiore interna, costituita da 2 guanciali e dall'EPP anteriore della mentoniera.

Una volta rimossa, con un solo movimento, diventa possibile dare più spazio e accesso alla testa del pilota infortunato.

Si tratta di un sistema rivoluzionario in ambito motociclistico, siamo orgogliosi di presentare un importante progresso in questo settore.

1 - PULL THE RED BUTTON INSIDE THE CHINGUARD

2 - PULL DOWN AND FORWARD THE FRONT PART OF THE EVA CHINBAR

MIPS TECHNOLOGY

MIPS stands for Multi-directional Impact Protection System, which is a leading slip-plane technology inside the helmet designed to reduce rotational forces that can result from certain impacts.

WHY IT'S IMPORTANT

When a head rotates quickly and comes to a sudden stop, the rotational acceleration can cause the brain tissue to experience high levels of strain. The stretching of the tissue that can be caused by these motions can result in various types of brain injury. We believe that helmets equipped with MIPS technology can provide an additional measure of protection in certain impacts.

HOW IT WORKS

MIPS uses a slip-plane system that moves inside the helmet, mimicking the brain's own protection system. This layer is designed to rotate inside the helmet with the intent to potentially slow or reduce the amount of energy transferred to or from the head. Science tells us that if we can reduce the strains associated with rotational acceleration, we might reduce the risk and severity of brain injury.

in laboratory tests, adding the MIPS layer reduced rotational acceleration by 20-35%, dampening crashforces and decreasing stress to the brain.

ULTIMATE MX GOGGLES

NERVE

// INJECTION-MOLDED 2MM ULTRA HD LENS
// DOUBLE FRAME CONSTRUCTION

We are limited not by our abilities but by our vision.

The Nerve goggle gives you the opportunity to break down these limits,

Experience definition and subtlety never before viewed through the lens of a goggle.

The Nerve's design focuses primarily on maximizing the rider's field of vision with the pre-curved injection moulded 2mm ULTRA HD lens.

Industry leading features with a dual-material frame construction and a Quick-release lens system that doubles as a locking mechanism for lens removal/replacement.

Just 1 Nerve goggle, the product of extensive collaboration and testing with JUST1 riders and rightly takes its place as JUST1's new top-of-the-line goggle.

Ciò che ci limita non sono le nostre abilità, ma la nostra visione degli ostacoli.

La maschera Nerve ti darà l'opportunità di superare questi limiti, espandendo il tuo campo visivo.

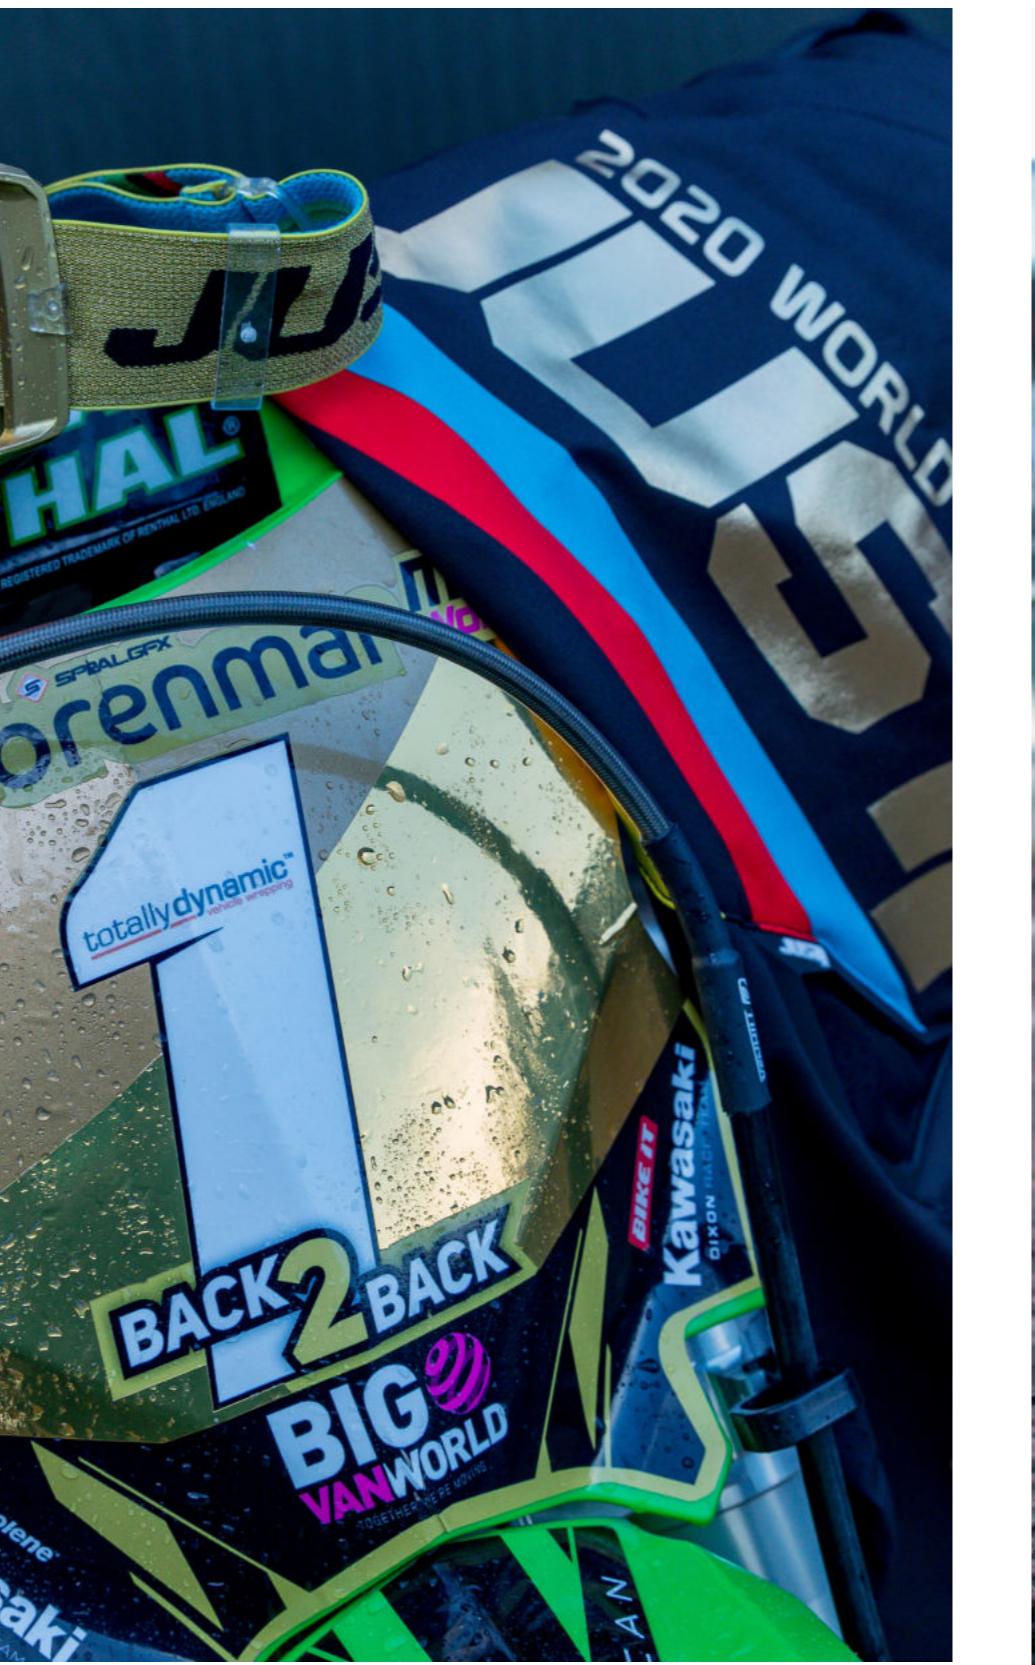

Sperimenta una definizione e raffinatezza mai viste prima attraverso la lente di una maschera.

Il design e la struttura di questa maschera sono stati sviluppati con l'obiettivo principale di aumentare il campo visivo del pilota. Altri due importanti caratteristiche distintive sono: la costruzione a doppio telaio con differenti materiali e il Quick-Release Lens System per rendere la sostituzione della lente più rapida e intuitiva.

Questo prodotto nasce da una lunga collaborazione con i piloti JUST1 presenti nelle diverse categorie, per portare la maschera Nerve a essere la maschera top di gamma della collezione JUST1.

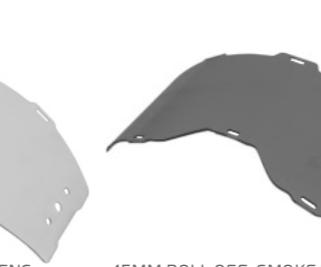

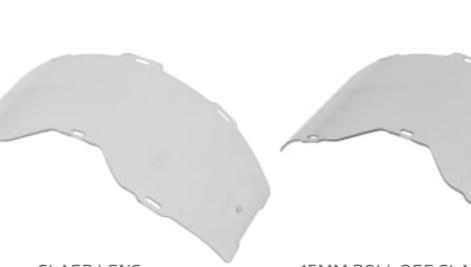

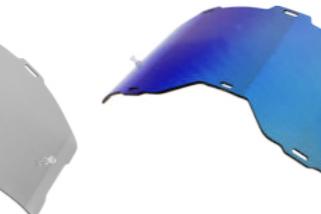

A female motocross rider, the 2020 MX Women's World Champion, stands on a podium holding two trophies. She is wearing a black vest with '2020 WORLD CHAMPION' and 'JUST1 Kawasaki' logos, along with a yellow cap and goggles. The background features a blue wall with various sponsor logos, including Husqvarna, KTM, MXGP.com, and Dunlop.

The Just1 Racing JBX-R Motocross Boots are part of the latest Just1 Racing collection, it is a culmination of rider input and pure innovation and design.

The JBX-R offers premium performance right out of the box. With a hinge and buckle system, the JBX-R boot provides an immediate step in comfort and support. Additionally, the hinge together with the YF system on the back provides lateral support and locks out to stop motion before hyperflexion and hyperextension of the ankle, while the easy buckle system flexes fluidly with the boot for ease of movement. The JBX-R boot improves performance by giving you greater command of the dirt bike. A slim medial design gives you an intuitive feel of the bike, with a low ride chassis providing smooth shifting and better control of the rear brake.

Lo stivale da motocross JBX-R è parte della più recente collezione di Just1 Racing.

Grazie al sistema di chiusura con fibbia e perno, lo stivale JBX-R offre un'immmediata sensazione di comfort e tenuta. Inoltre, il sistema a perno insieme al sistema YF nella parte posteriore assicurano un eccellente sostegno laterale e impedisce l'iperestensione e l'iperflessione della caviglia, mentre le pratiche fibbie accompagnano i movimenti di flessione dello stivale con fluidità, offrendo una migliore libertà di movimento.

Lo stivale JBX-R ottimizza le prestazioni offrendoti un migliore controllo della moto. Il taglio attillato della parte mediale del gamba permette di sentire meglio la moto, mentre la struttura ribassata agevola il cambio marce e il controllo del freno posteriore.

Features

- Lightweight microfiber upper combined with impact and abrasion-resistant PU shell
- Performance double pivot motion control system for improved levels of flexibility and precision.
- Innovative YF-System provides both energy dampening and impact absorbing qualities with a full or custom foot movement range of 15 degrees, 25 degrees or free.
- Improved levels of contact grip and control through PU and rubber inner ankle and calf panels that also provide exceptional all-important heat resistance.
- Contoured sole for improved grip and feel.
- Removable and changeable central sole insert.
- 3 buckle closure system for security, durability and strength.
- PU protection and shock absorbing padding on the heel and ankle.
- Removable dual compound footbed
- Soft microfiber gaiter seals out water and dirt
- CE certified

Caratteristiche

- Tomaia in microfibra leggera combinata con guscio in PU resistente agli urti e alle abrasioni
- Sistema di controllo del movimento a doppio perno ad alte prestazioni per livelli migliorati di flessibilità e precisione.
- L'innovativo sistema YF fornisce un alto livello di assorbimento degli impatti fornendo un intervallo di movimento del piede completo di 15 gradi, 25 gradi o libero.
- Livelli migliorati di grip e controllo grazie agli inserti in PU e gomma su caviglie e polpacci, che forniscono anche un'eccellenza e fondamentale resistenza al calore.
- Suola sagomata per una migliore aderenza e sensibilità.
- Inserto centrale della suola removibile e intercambiabile.
- Sistema di chiusura a 3 fibbie per sicurezza, durata e resistenza.
- Protezione in PU e imbottitura antiurto sul tallone e caviglia.
- Plantare a doppia mescola removibile
- La morbida ghetta in microfibra sigilla l'acqua e lo sporco
- Certificato CE

WEIGHT / PESO : FROM 1900 gr

INSIDE LENGTH (CM)	25.5	26.5	27.5	29	29.5	30.5	31.5

YF-SYSTEM

Lo stivale JBX-R è studiato per agevolare e aiutare la guida moderna della moto off road, prevalentemente in piedi sulla fascia plantare anteriore.

La caratteristica principale fa basamento su una struttura in PU e rinforzi in Nylon di tallone, zona malleoli e plantare ben dimensionati per sopportare le sollecitazioni più estreme, che abbinata al gambaletto della tibia in PU e collegati tramite perni in acciaio insieme al sistema YF nella parte posteriore, assicurano un eccellente sostegno laterale contrastando la distorsione e l'iperestensione e iperflessione del piede, accompagnando il movimento naturale della caviglia.

L'innovativo sistema YF fornisce un alto livello di assorbimento degli impatti, con la possibilità di un intervallo di movimento del piede, mediante regolazione dell'ipertensione del tendine calcaneale (Tendine di Achille) di 25 gradi, 15 gradi o completamente libero.

Lo stivale JBX-R standard viene confezionato con il blocco a 25 gradi, è dotato dello spessore di blocco a 15 gradi come ricambio, altrimenti è possibile rimuovere i blocchi e usare lo stivale libero.

Il sistema YF è basato su un'asta a Y rovesciato, in nylon asolato, che assicura rigidità e robustezza. Fissata tramite viti sulla struttura tallone dello stivale, assicura il movimento unidirezionale assicurato dai perni laterali di snodo e da un carter in nylon che salvaguarda la direzionalità, contrastando così movimenti anomali del piede.

La regolazione è assicurata sotto il coperchio posteriore (foto): rimuovere le due viti di fissaggio, all'interno del coperchio rimuovere il fermo (foto), da sostituire o togliere a seconda delle esigenze.

Tre pratiche fibbie accompagnano i movimenti di flessione dello stivale con fluidità, offrendo una migliore libertà di movimento.

The JBX-R boot is designed to facilitate modern off-road motorcycle riding, mainly standing on the front planter area.

The main body of the boot uses a PU structure along with Nylon reinforcements in the heel and ankle area. The inner sole and foot bed also utilise the same technology and construction to ensure the most extreme forces are dealt with, while ensuring maximum comfort.

The lower part of the boot is connected with a PU tibia cuff and connected with our ground breaking YF system on the back of the boot, this system ensure excellent lateral support by counteracting direct impacts along with, hyper-extension and hyperflexion of the foot, mimicking the natural movement of the ankle joint.

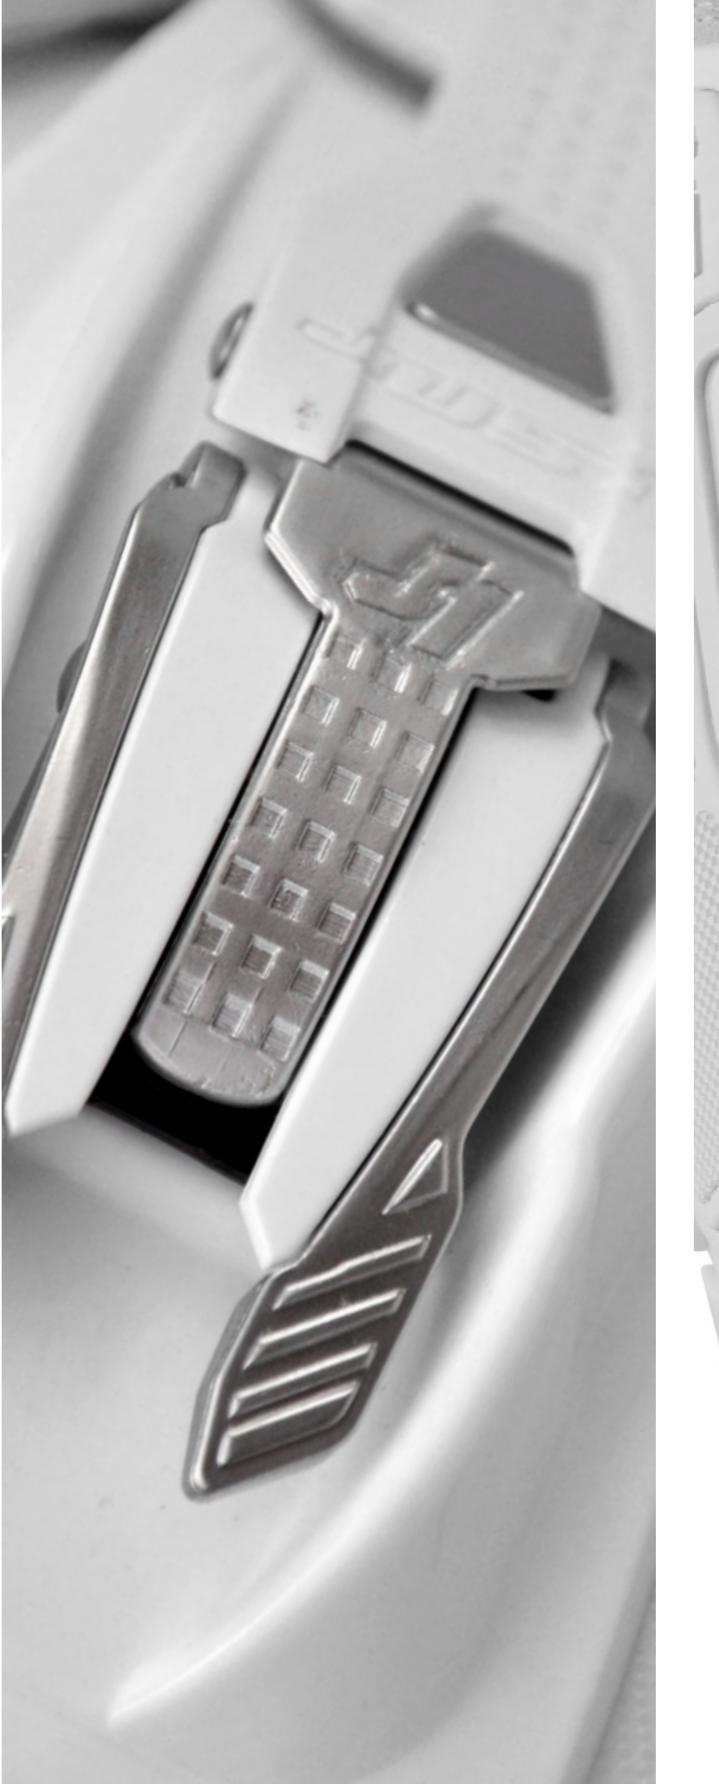

The ground breaking YF-System provides unrivalled levels of energy and impact dispersion while providing the ability to customise the range of movement of the calcaneal tendon, by adjusting the levels of flexion from 25 degrees to completely free.

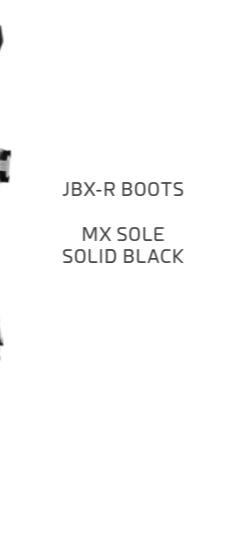

Out of the box the JBX-R boot is set up using the 25 degree lock. Changing to either the 15 degree lockout or neutral position is an easy process that only requires removing the two fixing screws and inserting the desired level of flexion; otherwise you can remove the locks and use the boot without any lock to use in the neutral position.

The YF system is based on an inverted Y shaped rod, constructed of ballistic nylon, which creates the right balance rigidity and strength for the stresses of modern off road riding.

Secure fixing is achieved through a 3 soft touch buckle system allowing a greater level of flexibility and ease of removal.

LEG LENGTH	73	75	77	79	81	

An aerial photograph of a motorcycle racing track. A single rider on a green and white motorcycle is leaning into a sharp turn on the dark asphalt. The track features a vibrant curb line composed of red, yellow, and green segments. The surrounding landscape is a mix of dry, brownish-green fields and a few sparse trees under a clear sky.

ON ROAD HELMETS

R A C I N G H E L M E T

FEATURES

• SHELL

4 sizes - 3K Carbon Fibre Shell
4 sizes - EPS Shell
4 sizes - EPP Shell

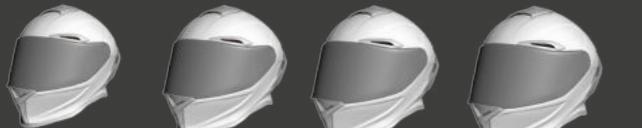

- DOUBLE D RETENTION SYSTEM
- REMOVABLE AND WASHABLE INNER LINING
- PROTX2™ ANTIMICROBIAL TECHNOLOGY
NEW LINING TREATMENT

CARATTERISTICHE

- CALOTTA
4 taglie - Calotta in carbonio 3K
4 taglie - Calotta EPS
4 taglie - Calotta EPP

- SISTEMA DI RITENZIONE A DOPPIA D
- INTERNI TOTALMENTE REMOVIBILI E LAVABILI
- NUOVI INTERNI TRATTATI CON TECNOLOGIA
ANTIBATTERICA PROTX2™

• SIZE RANGE / TAGLIE

4 shells :
S : 1400±50g
M : 1420±50g
L : 1510±50g
XL : 1550±50g

CCC certification - 2 shells :
M : 1510±50g
L/XL/XXL : 1550±50g

- IN THE BOX :
- HELMET BAG
 - NOSE COVER
 - PINLOCK 70
 - DARK SMOKE VISOR

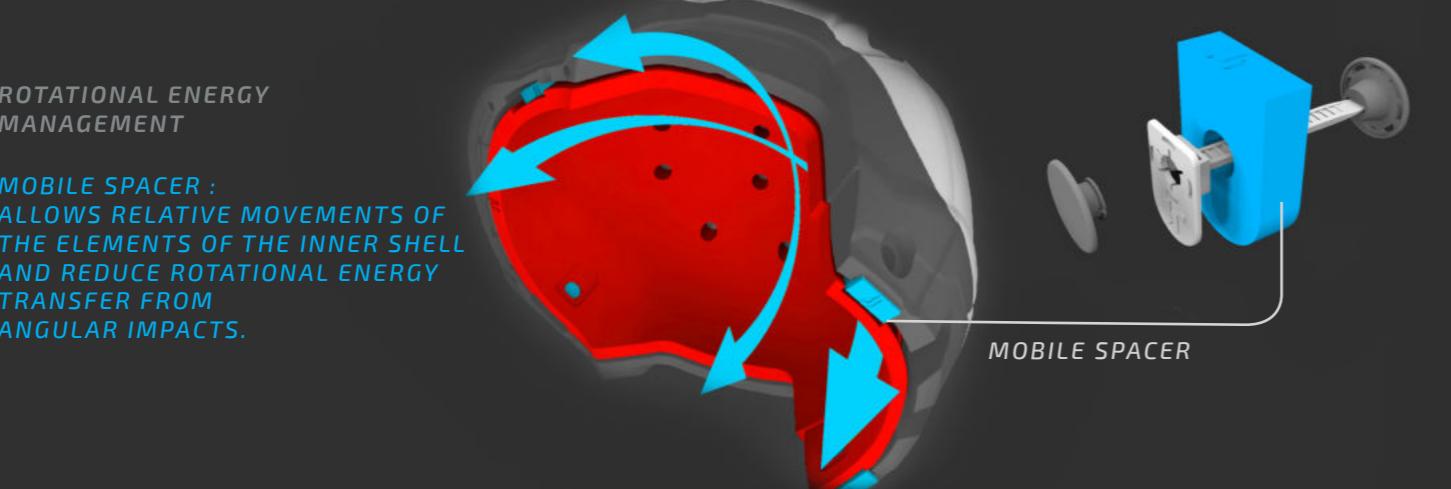

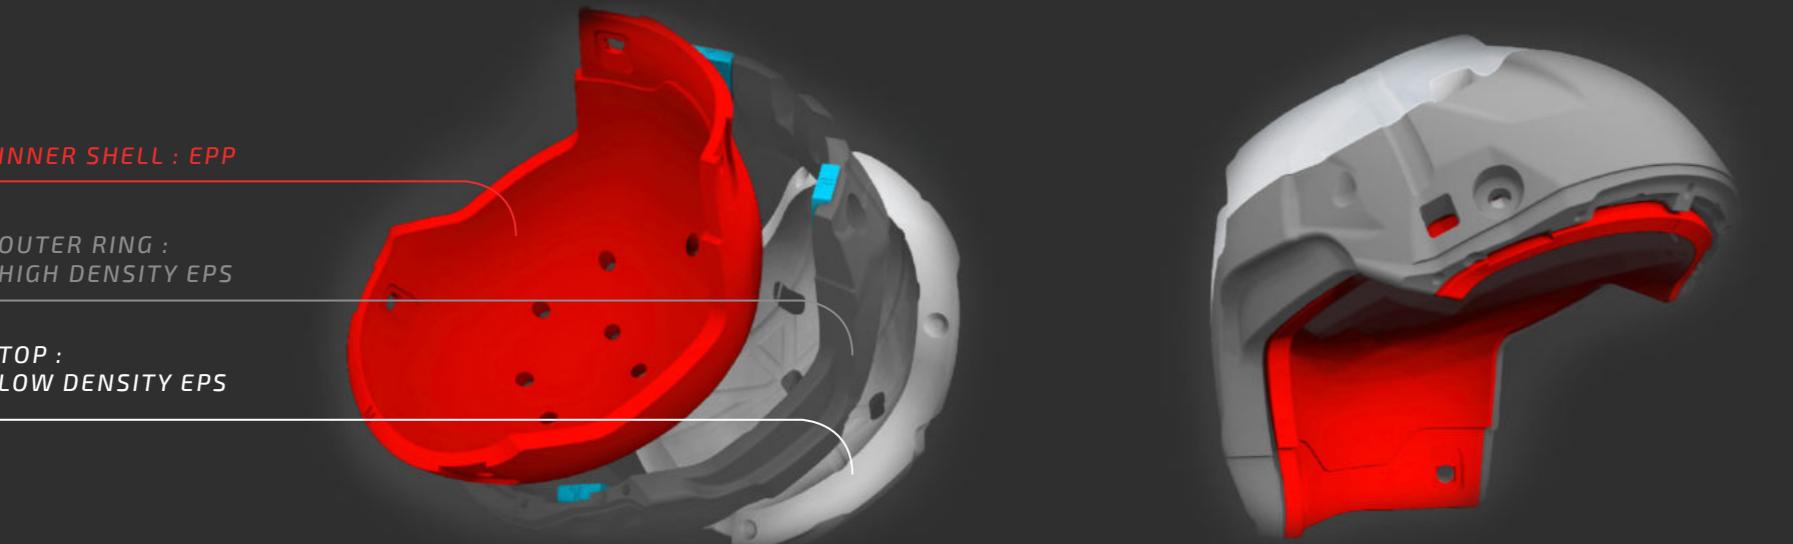

SEQUENTIAL DENSITY CONSTRUCTION

The J-GPR is the most advanced helmet we've ever made. The J-GPR is designed to manage linear and rotational energy to the head during impacts through its S.O.C. system. The J-GPR is quickly setting a new level for rider protection on-road and within racing. Riders today need a helmet that provides pro level protection, the sequential density construction of this helmet uses specific materials of differing density to manage the force of impacts.

J-GPR è il casco più innovativo mai realizzato da JUST1, è stato progettato per gestire l'energia lineare e rotazionale durante l'impatto alla testa. Il J-GPR sta rapidamente stabilendo un nuovo livello di protezione nelle competizioni su strada. I motociclisti oggi hanno bisogno di un casco che fornisca una protezione di livello professionale, infatti grazie alla costruzione a densità sequenziale di questo casco siamo in grado di gestire la forza d'impatto.

HELMET AERODYNAMICS & VENTILATION SYSTEM

Ventilation is essential.

In order to achieve the highest level of performance, various stages of aerodynamic tests are performed in the wind tunnel test lab in parallel with live testing situations. With mouth,top,eyebrow massive and multiple air vents system, JUST1 J-GPR is designed to maximize airflow to your head. Tried and tested ventilation that allows for proper extraction of heat from the helmet, allowing for a cooler ride in even warm weather conditions.

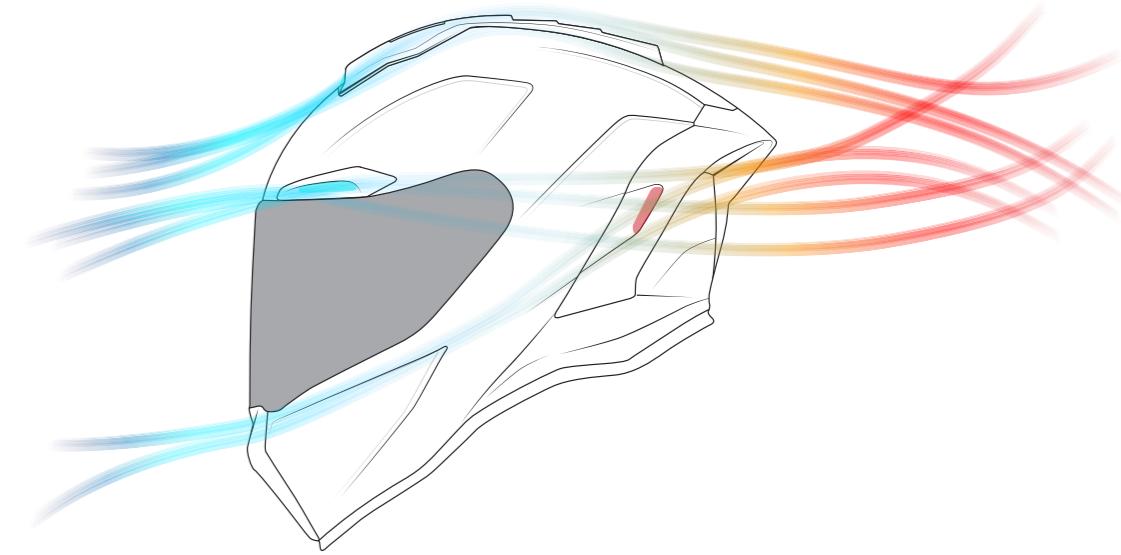

The helmet back spoiler is designed to follow perfectly the rider suit hump to maximize the aerodynamics during the races.

La ventilazione è essenziale.

Con multiple e importanti prese d'aria sulla mentoniera e sulla fronte del casco, JUST1 J-GP R è stato ideato per massimizzare il circolo d'aria intorno alla testa del pilota. Sistema collaudato di ventilazione integrale che consente una corretta estrazione del calore dall'interno del casco, per una guida sempre fresca anche in condizioni climatiche calde.

Nel laboratorio di prova della galleria del vento sono stati eseguiti vari test aerodinamici al fine di ottenere il massimo livello di prestazioni.

Per migliorare l'aerodinamicità del casco durante le competizioni è stato sviluppato uno spoiler che segue perfettamente la gobba sulla tuta del pilota.
